Sequence 3, Application US/09264737A

Patent No. 6107549

GENERAL INFORMATION:
APPLICANT: Feng, Paul C.C.
APPLICANT: Reng, Paul C.C.
TITLE OF INVENTION: Engineering Plant Resistance to Pyridines via
TITLE OF INVENTION: Expression of Esterase Enzymes
FILE REFERENCE: 38-21(10551) RLE3 Pyridine Tolerance
CURRENT APPLICATION NUMBER: US/09/264,737A
CURRENT FILING DATE: 1999-03-09
EARLIER APPLICATION NUMBER: 60/077,377
EARLIER FILING DATE: 1998-03-10
NUMBER OF SEQ ID NOS: 11
SOPTWARE: PatentIn Ver. 2.0
SEQ ID NO 3
LENGTH: 1701

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

The present nucleotide sequence, the coding region of which is also C claimed, is that of cDNA encoding human 53010, a novel member of the C carboxylesterase family. The invention provides 53010 nucleic acids, cantisense molecules, expression vectors, host cells, transgenic animals, 53010 proteins, fusion proteins, antigenic peptides, anti-53010 cantibodies and methods for detecting the presence of 53010 polypeptides or nucleic acids, of identifying a compound that binds to the 53010 completed, and of modulating the activity of the polypeptide. The 53010 convergence controlling agents for controlling disorders involving aberrant or controlling agents for controlling disorders involving aberrant or controlling agents for carboxylic esters. As 53010 mRNA is highly capression is regulated in some rodent pain models, 53010 molecules can also act as novel diagnostic targets and therapeutic agents for controlling neurological disorders, such as pain-related disorders. A controlling neurological disorders, such as pain-related disorders. A controlling neurological disorders, such as pain-related disorders. A controlling cell involves administering a compound that modulates 53010 cativity or expression. 53010 nucleic acids are also useful in chromosome carrays, for detection of variations or mutations, as surrogate markers and in pharmacocennomics.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Query Match

The present invention describes the use of polypeptides related to urological disorders for identifying a compound capable of treating a unlogical disorder, identifying a subject having a urological disorder, or treating a subject having a urological disorder. Also described: (1) a method for identifying a compound capable of treating a urological disorder; (2) a method for identifying a subject having a urological disorder; (2) a method for treating a subject having a urological disorder. The compound has uropathic and cytostatic activities. The polypeptides related to urological disorders are useful for identifying a compound capable of treating a urological disorder, identifying a subject having a urological disorder. Disorders include urinary incontinence and benign prostatic hyperplasia. The present sequence encodes a human urological disorder related protein, which is used in the exemplification of the present
                                                                                                                                                                                                                                                                                                                                                    Use of polypeptides related to urological disorders, e.g. 44390, 54181, 211 or for identifying a compound capable of treating a urological disorder or identifying and treating a subject having a urological
                                                                                                                                                                                                                                                                                                Claim 1;

```
The invention relates to an isolated polypeptide with signal sequences CC which allow it to be secreted extracellularly or membrane associated. The CC activity of polypeptides of the invention may be described as, CC cytostatic, vulnerary, antiarteriosclerotic, antiparkinsonian, nootropic, CC neuroprotective, immunosuppressive, haemostatic, antiinflammatory, CC cardiant, antiulcer, virucide, antithyroid, cerebroprotective, anorectic, CC useful in the treatment, or as a vaccine in the prevention of, cancer, CC wound healing disorders, infection, atherosclerosis, Parkinson's disease CC and Alzheimer's disease, autoimmune disorder, haematopoietic disorders inflammation, neoplastic diseases, nervous system related disorders and cardiovascular disorders, pancreatitis, respiratory disorder (CC cardiovascular disorders, pancreatitis, respiratory disorder, thyerproliferation, systemic autoinmune diseases, byper-immunity, CC developmental abnormality, gastrointestinal ulceration, neuropathy, CC developmental diseases, metabolic diseases, sperm dysfunction, thyroid CC cardiovascular diseases, metabolic diseases, sperm dysfunction, thyroid CC cardiovascular diseases, neurological diseases, stroke, angiogenesis, CC cvalation disorders, diseases in the spinal cord, thyroid gland, heart, CC growth abnormalities, and alleviation of precocious puberty. The CC sequences given in records ABQ86130-ABQ86184 represent novel human cDNA's
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      06-FEB-2001;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The invention relates to an isolated human drug metabolising enzyme (DME) and its nucleotide. DME is useful for diagnosing, treating or preventing disorders associated with aberrant expression of DME, where the disorders
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Sanjanwala MM, Yao

The invention relates to novel diagnostic and therapeutic polynucleotides selected from one of the 2722 sequences defined in the specification. A polynucleotide of the invention may have a use in gene therapy. The human diagnostic and therapeutic polynucleotides (dithp) or polypeptides may be used to diagnose a particular condition, disease or disorder associated
                                                                                            New diagnostic and therapeutic polynucleotides and polypeptides, useful in diagnosing a condition, disease or disorder associated with human molecules, e.g. autoimmune or inflammatory disorders, in gene therapy o

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              with human molecules, e.g. cell proliferative disorders, autoimmune/inflammatory disorder, developmental disorder, endocrine disorder, neurological disorders, gastrolitestinal disorders, or infections caused by virus, bacteria, fungi or parasite. The dithp molecules may also be used in genetic mapping, in identifying individuals from minute biological samples, in detecting single nucleotide polymorphisms, as molecular weight markers, and for somatic or germline gene therapy. The present sequence represents a dithp polymucleotide of the invention. Note: The sequence data for this patent is not represented in the printed specification, but was obtained in electronic format directly from WIPO at www.wipo.int/pct/en/sequences/listing.htm
